ABOUT ME

From *diagnosis* to product strategy

5+ years of experience at the intersection of healthcare, design, and technology. I specialise in product vision and strategy, aligning business objectives with user needs through rigorous research, prototyping, and data-driven validation.

I made the switch from medical doctor to product designer, because I realised that the biggest problems in healthcare wouldn't be solved one patient at a time. They'd be solved through technology and design.

That shift taught me that the skills that make you good at healthcare products make you good at any complex, regulated industry. Health, fintech, energy. They all involve multiple user groups with intertwined journeys, sensitive data, heavy regulation, and real consequences when you get it wrong. The complexity is the same. So is the opportunity to make a meaningful difference for a lot of people.

But understanding a problem and designing a solution isn't enough. If the impact is going to last, it has to be tied to a viable business. That's the part I care about most. Building products that create measurable outcomes for people and for the organisations behind them.

HOW I WORK

From understanding to *measurable* impact

I start with the business, the market, and the people, then work towards a solution that delivers real outcomes.

01

Understand

Map the business, the market, and the users. Identify what's actually worth solving, and what isn't. In regulated industries, understanding the constraints is half the work.

02

Vision & Strategy

Define where the product needs to go and build the case for why. Align stakeholders around a shared direction so every decision that follows has a rationale and a business logic.

03

Discover & Design

Research, ideation, prototyping, and testing with real users. Move fast, but validate before you commit. The goal isn't a beautiful prototype. It's confidence that you're building the right thing.

04

Deliver & Measure

Ship, track, and learn. Design doesn't end at handoff. It ends when the numbers show it's working. If the impact isn't measurable, it isn't real.

WORKING WITH AI

Think → AI → Think

I think, I delegate, I think again. The result is only as sharp as the question I ask and the judgment I bring to it.

The right foundation

A shared toolchain of custom skills, hooks, and plugins versioned in GitHub. Tool choices made with the engineers who ship the code, so prototypes run on the real component library. Compliance built in — GDPR, DPAs, and sandboxed models where the data demands it. And projects structured so a model onboards cold, the same way a new teammate would.

AI in the strategy & design process

Desk research, transcription, and data analysis (Good Tape, Dovetail, Maze, Perplexity). High-fidelity prototypes built on the real design system and AI-simulated user testing (Figma Make, Claude Design, Claude Code). Copy, imagery, and user stories locked to the existing visual system (Figma MCP, Figma Weave). Slides, workshop materials, reports, and handoff documentation (Claude Code).

PROJECTS

Project *experience*

2026 — PRESENT

Shared Public Treatment Platform · Region of Southern Denmark

Product Manager & Product Designer

Denmark's national platform for digital therapy, closing the treatment gap for citizens who are too unwell for general practice but not referred to psychiatry. Three interconnected products: an editor for building therapy programmes, a clinician tool for monitoring and communicating with patients, and a citizen app for completing treatment at your own pace. Responsible for product strategy, user research, concept development, prototyping, and user testing, designed to meet WCAG and MDR requirements.

HEALTH

[Case study online ↗](#)

2025 — 2026

Arla Mat · Arla Sweden

Product Design Lead

Helped Arla Sweden turn a huge recipe library into a personal cooking experience. Defined the product vision and strategy and developed and A/B-tested new concepts, resulting in a 5× increase in cooking activity, stabilised retention, and an App Store ranking jump from 72 to 33.

[Case study online ↗](#)

2025 — PRESENT

Digitalised Medication Review · Bispebjerg Hospital

Product Design Lead

Digitalising the medication review process at Bispebjerg Hospital, translating a complex clinical workflow into a tool that supports safe, efficient medication reviews.

HEALTH

2025 — PRESENT

Employee & Manager Platform Redesign · Evovia

Product Designer

Redesign of Evovia's platform for structured employee and manager development dialogues, modernising the experience for both the employees preparing for conversations and the managers running them.

2025 — PRESENT

Flexii · EWII

Product Designer

A self-service platform giving owners of solar panels, wind turbines, and batteries a clear view of the value their flexible energy assets create. Turned complex, fluctuating market data into actionable insight through concept development, user flows, and wireframing.

ENERGY

[Case study online ↗](#)

2024 — PRESENT

Telma (FUT) · City of Copenhagen

Product Designer

Responsible for ensuring new Telma features create maximum value for end users through user-friendly communication and guidance on how new functionality can be adopted in everyday clinical practice.

HEALTH

PRODUCT LAUNCH

IT IMPLEMENTATION

2024 — PRESENT

Gravitate Health

Design Lead

A public-private partnership of 41 members across Europe and the US, led by the University of Oslo and Pfizer and funded by the Innovative Medicines Initiative, creating electronic package leaflets that are clearer and more relevant, so citizens get a better overview of their health and treatment. Responsible for concept development and user testing of electronic package leaflets in existing Danish health apps.

2023 — 2024

Welcome · Jyske Bank

Product Designer

Conducted market and trend analysis and UX research ahead of a five-day design sprint. Co-planned and facilitated the workshop, helping the client prioritise business and user needs, then developed and tested concepts for a new solution to meet them.

2022 — 2024

Shared Medication Decision Support (FMB) · North Denmark Region

Design Lead

A national EU-tendered project by the Danish regions and the Organisation of General Practitioners: an evidence-based decision support system integrated into the regions' medication systems and GP practice systems, built to reduce medication errors and medicine-related hospital admissions. Shaped the product vision and strategy with the client, including an analytics tool for capturing end-user feedback on existing and upcoming functionality. Ran workshops and concept development with the business, developers, and clinicians to extend FMB into new verticals, including paediatrics and an AI module supporting correct, optimal medication for patients.

STAKEHOLDER MANAGEMENT

2023

Samblik Multisyg · Steno Diabetes Center Aarhus

Research & Facilitation Lead

Prepared and facilitated a five-day design sprint to create and test a new concept for cross-sector care of patients with multiple chronic conditions. Preparation included analysis of existing evidence and interviews with internal and external stakeholders and clinicians, distilled into the most promising focus areas. The sprint delivered prioritised focus areas, the first concept for the digital product, and a strategy for securing political and financial backing.

PRODUCT VISION & STRATEGY WIREFRAMES USER TESTING UX DESIGN

2023

Customer Onboarding · Concordium

Product Designer

Led the initial research and stakeholder interviews to build a thorough understanding of the connection between the Concordium business and its crypto wallet. Contributed to analysis of the existing user journey and design of the redesigned journey.

FINANCE UX DESIGN PROTOTYPING

2022 — 2023

Samblik Børn · Steno Diabetes Center Aarhus

Product Designer

Used existing data sources to create a unified, cross-sector overview of children's development from birth to school age, supporting early detection of and action on childhood overweight. Shaped the overall design process with the client: analysis of existing research on childhood overweight, review of existing software systems, interviews with health visitors and doctors, a digital prototype of the concept, and user testing with health visitors.

HEALTH UX RESEARCH WORKSHOP FACILITATION PROTOTYPING CONCEPT DEVELOPMENT

2022 — 2023

Compassana · Bluespace Ventures

Product Designer

Gathered and analysed insights and facilitated workshops to help the client shape the product vision and strategy for a new concept in the private Swiss healthcare market.

HEALTH UX RESEARCH STAKEHOLDER MANAGEMENT WORKSHOP FACILITATION
PRODUCT VISION & STRATEGY HEALTH DOMAIN EXPERT

2021 — 2022

BioMedical Design · Novo Nordisk Foundation Fellowship Programme

BioMedical Design Fellow

Ten weeks of fieldwork and interviews at the paediatric department, Aalborg University Hospital. Co-developed the concept and business strategy for a medtech device and mobile application designed to help manage incontinence.

2019	Clinical Decision Support Systems (CDSS) · Central Denmark Region <i>Product Designer</i> A research and innovation project backed by Innovation Fund Denmark, developing a clinical decision support system that helps healthcare staff in municipalities and hospitals identify citizens at risk of acute admission. Responsible for connecting patient and clinician needs with Enversion's AI technologies, applying clinical insight, research experience, and product design to AI health solutions. Helped build '+prio', an intelligent tool that helps clinicians prioritise patients. HEALTH PRODUCT DESIGN UX RESEARCH PROTOTYPING HEALTH DOMAIN EXPERT PRODUCT VISION & STRATEGY Case study online ↗
2017	Business Models for Successful Telemedicine · Aarhus University Hospital <i>Researcher</i> Responsible for planning, conducting, and reporting a research project examining the business models behind successful telemedicine solutions. After analysing the Danish telemedicine market, conducted qualitative interviews with representatives of the companies behind the most successful solutions. Results published in Health Services Management Research. HEALTH RESEARCH QUALITATIVE INTERVIEWS HEALTH ECONOMICS BUSINESS MODELS Case study online ↗
2017	Neonatal Hypoglycaemia · Randers Regional Hospital <i>Product Designer</i> Concept development and testing of an app that supports correct treatment of neonatal hypoglycaemia by keeping track of treatment algorithms, timing, and registration, and calculating medication doses. HEALTH UX RESEARCH WORKSHOP FACILITATION USER TESTING DIGITAL PROTOTYPES
2016	Family Pedigree · Department of Clinical Genetics, Aarhus University Hospital <i>Product Designer</i> A family pedigree app helping patients collect family health information ahead of consultations at the Department of Clinical Genetics, improving clinical quality, making better use of the department's resources, and increasing patient flow. HEALTH UX RESEARCH DIGITAL PROTOTYPES WORKSHOP FACILITATION
2016	Data Across Sectors · Aarhus Municipality <i>Product Designer</i> An application supporting better sharing of patient information between the geriatric department at Aarhus University Hospital and Aarhus Municipality when collaborating on the care of geriatric patients. HEALTH UX RESEARCH
2015	Trial Finder · Aarhus University Hospital <i>Product Designer</i> A more efficient way to manage research protocols, improving the overview of active protocols and easing patient inclusion. HEALTH UX RESEARCH

EXPERIENCE

Career

2022 — PRESENT

Duckwise

Product Designer

Leading product design across multiple client engagements in health, fintech, and energy. Responsible for end-to-end product discovery, from market analysis and user research through prototyping, testing, and delivery.

2019

Enversion A/S

UX Designer & Medical Advisor

Applied clinical insights, research experience, and UX design to AI health solutions. Helped build '+prio', an intelligent triage tool helping clinicians prioritise patients. Winner of the Health Tech Adoption Awards 2021.

2019 — 2021

Clinical Practice

Junior Doctor · Emergency Medicine, Orthopaedics, General Practice

Clinical rotations across emergency medicine, orthopaedic surgery, and general practice in Denmark. Developed first-hand understanding of healthcare delivery, clinical decision-making, and the systems that support, or hinder, good patient outcomes.

2017

Aarhus University

Research Assistant · Telemedicine & INNO-X Healthcare

Investigated business models of successful telemedicine implementations. Research published in peer-reviewed journal, contributing to the evidence base for scaling digital health solutions.

2015 — 2017

APPlab, Aarhus University Hospital

User Experience Designer

Designed digital health applications at the hospital's innovation lab. Combined medical domain knowledge with UX methodology to improve patient and clinician workflows.

SUMMER 2016

Mandal Kommune, Norway

Nurse Substitute

Provided hands-on patient care in a Norwegian municipal healthcare setting. Gained cross-cultural clinical experience and first-hand exposure to the Norwegian healthcare system.

2012 — 2015

FADL

Nurse Substitute

Worked as a nurse substitute through FADL (Danish Medical Students' Association) across various hospital departments. Built practical clinical skills and patient empathy alongside medical studies.

EDUCATION

Academic *foundation*

2021 — 2022	BioMedical Design <i>Novo Nordisk Foundation Fellowship Programme</i> Intensive fellowship focused on identifying unmet clinical needs and developing medtech solutions. Worked in multidisciplinary teams across clinical, engineering, and business disciplines to bring healthcare innovations from concept to viable product.
2014 — 2018	Aarhus University <i>Doctor of Medicine (MD)</i>
2011 — 2014	Aarhus University <i>Bachelor of Science (BSc), Medicine</i>
CERTIFICATION	UX Certificate, Nielsen Norman Group UX Vision & Strategy Measuring ROI Statistics for UX
CONTINUING ED.	Engineering & Software Courses Pervasive Healthcare, Aarhus University School of Engineering Mathematical Modelling of Linear Systems, Aarhus University School of Engineering Applied Linear Algebra, Aarhus University School of Engineering Introduction to Computer Science and Programming Using Python, MITx 6.00.1x
2006 — 2007	Paxon School for Advanced Studies <i>Rotary Youth Exchange, Jacksonville, Florida</i>

PUBLICATIONS

Research

Successful implementation of telemedicine depends on personal relations between company representatives and healthcare providers: A qualitative study of business models for Danish home telemonitoring.
